Our Program

PRE-TEST

A pre-test is written to place your child on the best path, level and year.

We have a meeting, scheduled to your convenience, to discuss the test outcomes

THE PROGRAMME

The program works with a database that records and archives student's scores, reaction times and extrapolates a more manageable curriculum time. The program, along with us, make a best estimation on future-dated tasks and work output.

Each student, thus, will work on a different time-table that best suits their individual needs. Students can also accelerate to the next grade any time of the year. No student needs to get bored or be held in a grade even when grade outcomes have been reached due to it just not being the next year.

GRADE 2 - 12

All students are encouraged to attend Friday morning exploration sessions, community engagement and do some extra reading instead of pure homework.

Life skills development is compulsory.

Career studies will be conducted from grade 8. Giving the students time to explore and learn more about certain professions.

Grade R and I

Our Grade R and I programme is geared toward nurturing students. The classes are small, no more than 12 students per class. Students get personal attention to ensure that problem areas are identified and properly addressed

Homework

No homework is given, unless a red flag is raised. Parents will be asked to have a meeting to discuss it. Students should rather use the afternoons to explore, be creative and be children

Committed to nurturing students toward global growth.

Our Vision

"To bring international education to a safe, supported and learner-centered zone"

We aim to engage students, re-enforce strengths and address weaknesses by supportive engagement
